

COH-A2 Carbon Monoxide and Hydrogen Sulfide

Introduction

Personal gas safety monitors can be found in most industries, with the requirement for multiple gas detection becoming commonplace. Most of these gas detectors measure both Carbon Monoxide and Hydrogen Sulfide. Alphasense’s new 2sense H₂S+CO gas sensor allows designers to reduce significantly their gas detector size and cost. The 2sense uses a patented approach to dual gas sensor design and utilises our also patented low Hydrogen sensitivity CO electrode.

A larger version of the D2 sensor, which has a proven track record in the field over many years, the 2sense does not compromise performance or long-term stability over the standard two-sensor solution when measuring both H₂S and CO.

Note: Above 85% rh and 40°C a maximum continuous exposure period of 10 days is warranted. Where such exposure occurs the sensor will recover normal electrolyte volumes, when allowed to rest at lower %rh and temperature levels for several days.
